Function

SIRCO PV are manually operated multipolar load break switches. Making and breaking capacity under load conditions up to 1500 VDC.

These extremely durable switches have been tested and approved for use in the most demanding applications.

They have been designed and tested for all types of applications: earthing, floating or bipolar.

Advantages

Optimise your investment

- Thanks to a reduced number of bridging bars, you can limit your costs and save mounting time.
- A 2 pole SIRCO PV will reduce heat and can be placed in a smaller enclosure.

Reliability and performance

Our range of SIRCO PV load break switches is compliant to standards IS/IEC 60947-3.

SIRCO PV have been tested to break critically low currents and withstand 10 kA short-circuit during 300 ms without any specific protection.

High quality materials

SIRCO PV is an extremely robust device in a glass fibre reinforced polyester frame.

This material provides:

- high mechanical strength,
- stability to temperature variations (RTI of 130°C),
- high dielectric strength (high CTI / tested as per standard ASTM D 2303).

Typical PV architecture

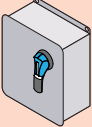

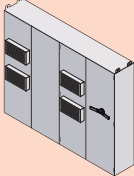

The SIRCO PV range provides safe load break and isolation at all levels within your PV installation.

INOSYS LBS

Load break switches for DC and PV applications
160 to 630 A, up to 1500 VDC

The solution for

- > Disconnection within PV installation
- > Battery protection
- > DC equipment & process isolation

Strong points

- > High-performance switching in a compact design
- > Easy integration
- > Reinforced safety with visible contact indication
- > Efficient with low power-loss

Compliance with standards

- > IEC 60947-3, DC-21B & DC-PV2

- > UL98B File E346418

- > KEMA-KEUR

- > CCC

Compatible with requirements

- > IEC 60364-7-712
- > NEC art. 690
- > AS/NZS 5033

Compliance with environmental standards

- > IEC 60947-1 Annex Q, Stage F
- > IEC 60068-2-1
- > IEC 60068-2-2
- > IEC 60068-2-27
- > IEC 60068-2-30
- > IEC 60068-2-52
- > IEC 60068-2-6

Functions

INOSYS LBS is a range of load break switches that can be manually controlled. These switches can be operated manually using the handle to disconnect all or part of the electrical installation. They ensure on-load opening / closing and safe disconnection of any low voltage electrical circuit up to 1500 VDC. They can also be used for emergency power switching applications. They are available for DC-PV2 utilization category.

Advantages

High performance power switching in confined spaces

INOSYS LBS load break switches incorporate patented technology that provides a breaking capacity of between 500 and 750 VDC per pole, providing 1500 VDC in just 2 poles, and significantly limiting power dissipation. All in an exceptionally compact enclosure.

Safe to use

- Direct position indicator on the bar and visible contact with containment of the electrical arc.
- The switch is completely independent of the operating speed, which ensures safe use under any conditions.
- High temperatures permitted: without derating up to 55 °C (131 °F), operational from -40 to +70 °C.

Designed for harsh environments.

- Vibration-tested (13.2 Hz to 100 Hz at 0.7 G).
- Impact-tested (15 g for three cycles).
- Humidity-tested (2 cycles, 55 °C, 95% humidity).
- Salt spray-tested (3 cycles with storage humidity, 40 °C, 93% humidity after each cycle).

Easy to install

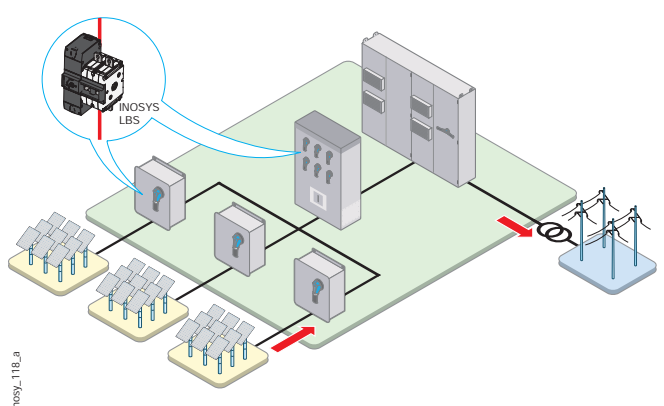

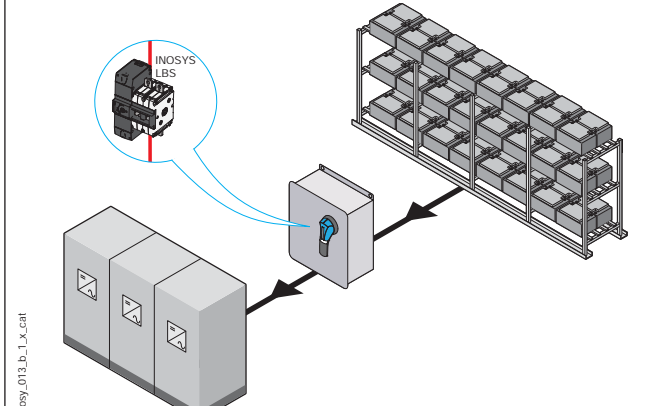

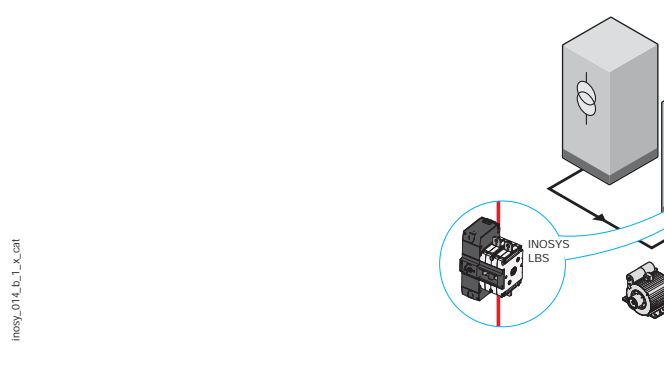

- Wiring: the non-polarisation of the switch allows for all types of wiring and connections.
- Integrated auxiliary contacts.

Modular solution for flexible configuration

- Single or double-pole switch
The same switch can be used on earth-connected or insulated networks with a simple change in the wiring configuration.

Typical applications: local safe disconnection for DC and PV applications

External operation handle

Use

The external control handles include a breastplate and can be padlocked. External handles should be used with a shaft extension.

Note: We recommend using IP55 for indoor and IP65 for outdoor applications.

Example of use:

When the handle is locked in the "ON" position, the operator must make sure to disconnect and isolate the circuit before accessing the board and carrying out maintenance work.

You can open the door when the switch is in the "ON" position by bypassing the lock function with a specially designed tool (authorised persons only). The lock is automatically re-applied when the door is closed.

Terminal shrouds

Use

For top or bottom protection against direct contact with terminals or connection parts; provides IP4 protection and phase separation. 1 P type to cover 1 pole connection.

Advantages

Perforations for thermographic inspection / voltage check without the need to remove the shrouds. Terminal shrouds can be fixed in place with a holding insert. Includes break-off tabs for precise adaptation to cables or insulated bars.

Frame size	Packaging (units)	No. of poles	Position	Reference

⁽¹⁾ Compatible with the holding insert which can be fitted to lock the shrouds in place.

access_407_a_1_cat

Terminal screens

Use

Provides top and bottom protection against direct contact with terminals or connection parts.

Advantages

Perforations for thermal checks. Assembly requires mounting inserts (provided with terminal screens).
