Advantages

Optimum load protection

- Permanent operation in VFI mode (online double conversion).
- The inverter isolation transformer provides galvanic separation of the DC current both from the load and the bypass source.
- Output voltage precision under all load conditions.
- High overload capacity to withstand abnormal load conditions.
- Easy maintainability reduces MTTR thanks to pull-out sub-assemblies and front access to all components.
- Hot-plug capability simplifies extension or redundancy while keeping high quality power.

Minimised Total Cost of Ownership

- High efficiency in VFI mode, including the transformer.
- High power density: its small footprint saves space on your premises.
- The high and constant input power factor helps limit the dimensions of your upstream network infrastructure.
- Mains connection of the rectifier requires only 3 cables (no neutral).
- High short-circuit capacity simplifies downstream protective devices.
- Battery connection to UPS requires only 2 cables.

Robust and reliable

- Field-proven technology.
- Fault-tolerant architecture with built-in redundant components.
- Fan failure detection and management
- Accurate diagnostics guarantee power supply to the load.
- Cascade failure prevention for parallel systems.
- Mechanical & electrical robustness for industrial environments.

Parallel systems

- Modular parallel up to 6 units, development without constraint.
